### Propagation

The sun remains spotless or nearly so. (This is beginning to sound like a broken record...) Solar flux continues to hover near its theoretical minimum, dropping below 70 for days at a time. Fortunately for DXers, the geomagnetic field has been quiet most of the time, permitting some DXing on the low bands, high-latitude paths, and long paths.

A good beacon for west-coast amateurs seeking Europe on 20 meters is Radio Norway on 13800 kHz at 1600Z. (DXers can thank propagation guru Bob Brown NM7M for getting Radio Norway to move to that frequency!) This station gives a good indication of conditions across the North Pole.

The propagation forecast is for more of the same: minimal openings on the higher bands (mostly north-south), daytime operation on 20 and 17 meters, and marginal conditions on 80 and 160 meters. 40 meters is good at night and around local sunrise. 30 meters is open to some part of the world essentially all day. Good hunting!
